LETTER OF RECOMMENDATION
Consolidated Waste Systems

To whom it may concern:

Trust Environmental Services provides waste and recycling management services to many of the largest waste generators in Florida and Southern Georgia. With that, most of our client utilize large scale compaction and other waste reduction machinery in their operations. Our clients depend on our company to dispatch the right company to perform installation, emergency repair service, and preventative maintenance on their equipment.

We have been working with Consolidated Waste Systems for the past 9 years, and believe they are the most trusted and capable source for keeping our clients operations running. They have been instrumental in designing custom solutions for our clients, and then making the process to completion seamless with a top-notch field staff and office support. They have the right equipment to fabricate, move, and repair any piece of equipment in the waste and recycling industry, and are always responsive to the many emergencies we have with our clients.

We highly recommend Garrett and the staff at Consolidated, as they have proven to be a great asset and trusted partner of Trust Environmental Services.

Kind Regards,

Mark Szaks
President
